

Trend Micro™ ScanMail™ for Microsoft™ Exchange

High-Performance Virus Protection with Optional Anti-Spam and Content Filtering for Microsoft™ Exchange

Problem

Viruses embedded in email attachments can infect the entire corporate messaging environment and spread throughout the network, bringing vital communications to a halt. Spam and other unwanted content can also disrupt email delivery, clog bandwidth, and reduce employee productivity. As networks grow and become more distributed, managing separate antivirus, anti-spam, and content filtering solutions presents a significant challenge—consuming more time and resources.

Solution

Trend Micro™ ScanMail™ for Microsoft™ Exchange delivers award-winning antivirus security to guard against viruses, Trojans, worms, and other malicious code hidden in email attachments. For additional security, Trend Micro ScanMail Suite for Microsoft Exchange combines virus protection with new anti-spam and advanced content filtering technology. With a centralised management console, administrators can easily access reporting, adjust scan settings, set security policy, and deploy automatic updates plus outbreak prevention policies—across all Exchange servers.

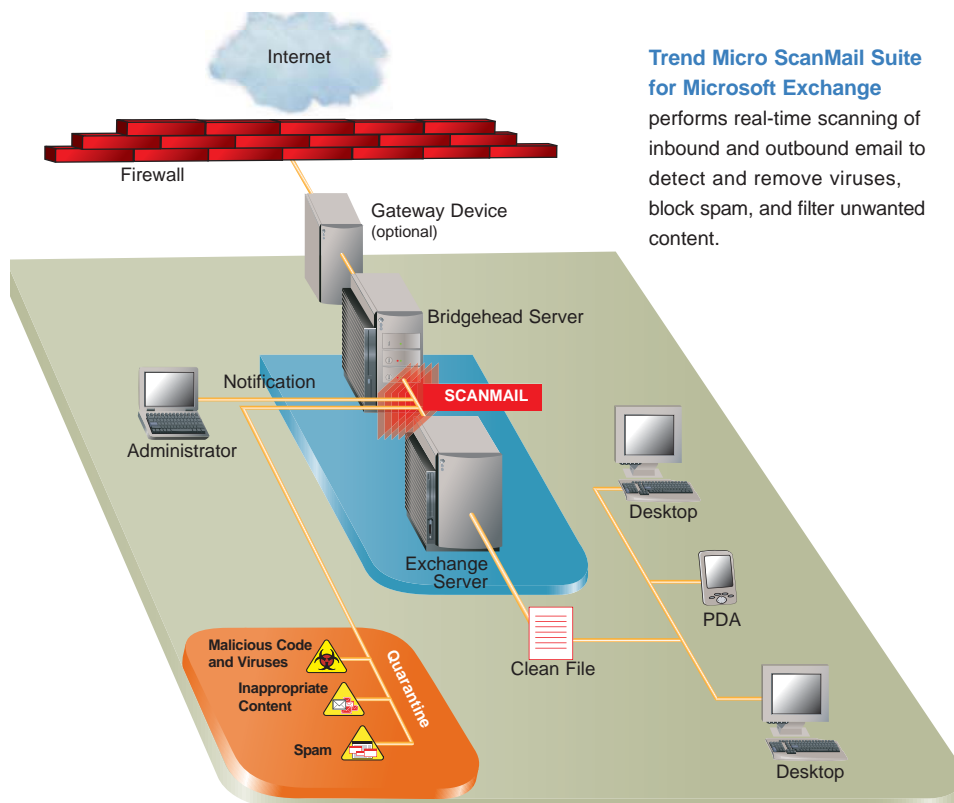

Trend Micro is the market share leader in email server security, according to the 2004 IDC Antivirus Segmentation Report.

KEY BENEFITS

- **Easy to Manage**
Reduces IT workload, enabling centralised deployment of group configurations, scan settings, notifications, and updates to all Exchange servers
- **High Performance**
Performs multi-threaded memory scanning for high-speed email delivery with minimal impact on network resources
- **Simple to Deploy**
Provides one, integrated solution, which can be deployed in a single process from a central location to one or multiple Exchange servers, including clusters
- **Low Total Cost of Ownership**
Minimises the cost and effort to deploy, manage, and maintain

“If you’re running Microsoft Exchange 2000 without using a full-featured antivirus package, you need to have your head examined. Assuming that exhaustive therapy can restore you to sanity, your first sane act should be to run, not walk, to your nearest software emporium and purchase Trend Micro’s ScanMail for Microsoft Exchange.”

Ron Anderson
Senior Technology Editor
Network Computing

Trend Micro™ ScanMail™ for Microsoft™ Exchange

High-Performance Antivirus Security

- Combines pattern recognition, virus behavior, and rules-based technologies to identify and remove viruses, Trojans, worms, and other malicious code
- Performs multi-threading and memory scanning to enhance email processing speed and minimise the impact on Exchange servers
- Preserves system resources, using IntelliScan to check inbound/outbound files and scan only potential virus carriers

New! SMTP Connector-Level Scanning

- Scans inbound/outbound SMTP connector-level traffic—for improved performance and efficiency
- Blocks viruses, unwanted content, and spam* in real-time—before they can enter the Exchange store
- Protects intra-company communications that flow between Exchange bridgehead servers

*Content Filtering and Anti-Spam are available only in ScanMail Suite for Microsoft Exchange

New! Anti-Spam and Anti-Phishing

(Available only in ScanMail Suite for Microsoft Exchange)

- Combines machine learning, pattern recognition, and heuristics to filter spam and phishing attacks with a high degree of confidence
- Uses signature files to block fraudulent emails related to phishing attacks—for added protection from well-disguised threats
- Offers Exchange-based End-User Quarantine so end users can inspect graymail, approve/reject senders, and manage their own approved sender list
- Integrates with Trend Micro™ Spam Prevention Solution for seamless spam management—from the messaging gateway to mail servers

Advanced Content Filtering

(Available only in ScanMail Suite for Microsoft Exchange)

- Filters inbound and outbound email based on keywords, true file types, attachment names, file sizes, and other content security rules
- Gives administrators the flexibility to construct rules using Boolean and regular expressions for advanced content filtering

Centralised Deployment and Administration

- **New!** Enables centralised deployment to one or multiple Exchange servers or server clusters—with true cluster API support
- **New!** Provides integrated group configuration, replication, and centralised update deployment out of the box
- Features a Web-based management console with Active Directory integration for centralised management of policy, quarantines, logging, and reporting across multiple servers

TrendLabsSM

Trend Micro products are backed by timely, high-quality service from TrendLabsSM, a global network of antivirus research and support centres with certification in ISO 9001:2000 and COPC standards. A team of more than 700 engineers and antivirus specialists operate around the clock to monitor virus activity, develop information on new threats, and deliver prompt, effective strategies. For more information about TrendLabs visit: www.trendmicro-europe.com/trendlabs.

Trend Micro Enterprise Protection Strategy

Trend Micro ScanMail for Microsoft Exchange is a product component of Trend Micro™ Enterprise Protection Strategy (EPS). EPS products and services deliver comprehensive protection at the application and network layers to proactively manage the outbreak lifecycle—from vulnerability prevention to malicious code elimination. ScanMail supports Trend Micro™ Outbreak Prevention Services to deliver preemptive security measures and integrates with Trend Micro Control Manager™ for centralised management of multiple Trend Micro security products throughout the enterprise.

Trend Micro, Inc.

Trend Micro, Inc. is a global leader in network antivirus and Internet content security software and services, focused on helping customers prevent and minimise the impact of network viruses and mixed-threat attacks through its award-winning Trend Micro™ Enterprise Protection Strategy. Trend Micro has worldwide operations and trades stock on the Tokyo Stock Exchange and NASDAQ.
