## Trend Micro™ NeatSuite™

Integrated and Centrally Managed Antivirus Suite

### PROBLEM

Organisations today are burdened by the proliferation of mixed-threat attacks such as Nimda and Slammer, which take advantage of multiple entry points and vulnerabilities in enterprise networks. These malicious programs use a variety of techniques to breach security at various entry points in the network, replicate rapidly, and perform hostile acts against network resources. IT managers face significant challenges in effectively securing their network as a result of the increased complexity of these attacks and the distributed nature of their organisation's computing environments. In addition, organisations adopting a dual vendor antivirus strategy require substantial effort in centrally managing and supporting disparate solutions at different layers in the network, thereby placing additional strain on their IT managers.

### STRATEGY

Trend Micro NeatSuite is a fully integrated, centrally managed suite of products designed to help protect virtually every access point in the enterprise. NeatSuite includes gateway, servers, and desktop antivirus applications, all of which are centrally managed by Trend Micro Control Manager™. The result is a powerful, multi-layered defence system that protects the corporate network against viruses and other malicious code.

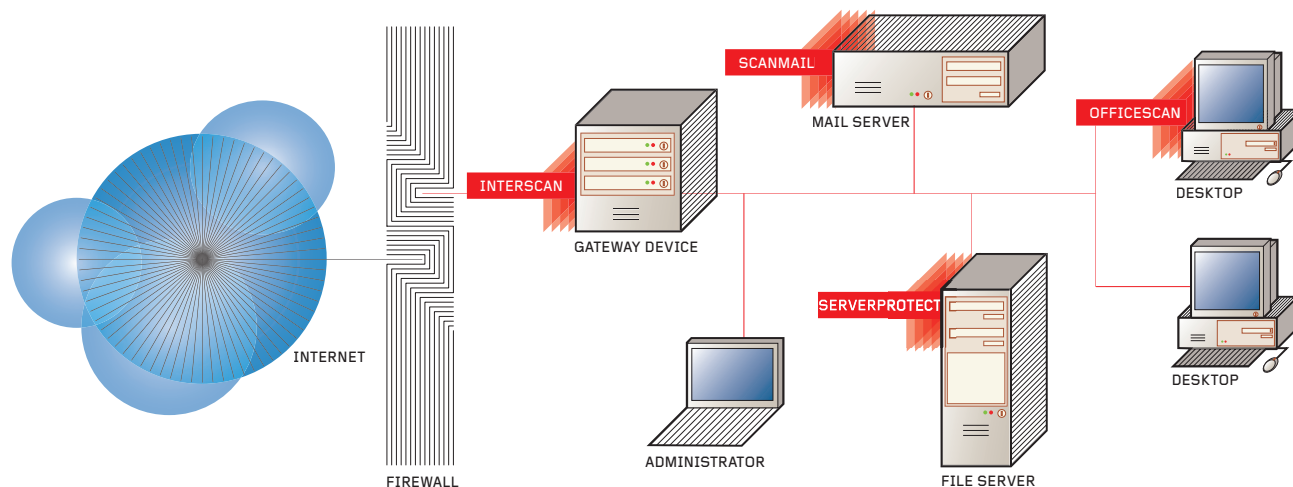

With NeatSuite, organisations can maximise the benefits obtained from Trend Micro Enterprise Protection Strategy (EPS), an innovative and unique approach to proactively manage the outbreak lifecycle. In conjunction with EPS, the comprehensive set of products included in NeatSuite enables organisations to effectively deploy threat-specific prevention policies to block mixed-threats at appropriate points across the entire network. Therefore, IT managers can take a proactive and cost-effective approach to securing their organisation against these complex threats regardless of where the impact is likely to occur in their network without having to rely on the traditional, reactive pattern-file only approach with an expensive dual antivirus vendor strategy.

### KEY BENEFITS

- Multi-layer defence at virtually every access point in the network provides comprehensive antivirus protection.
- Single point of contact administration, monitoring, and management of antivirus protection reduces complexity and burden on IT managers.
- A key component of Trend Micro Enterprise Protection Strategy (EPS) is Outbreak Prevention Services, which can minimise damage from virus attacks in advance of a pattern file being available.
- Centralised management updates and policy enforcement lowers operational costs.

*"We were impressed by Trend Micro's history of innovation in the crusade against computer viruses. We particularly liked its integrated offering, NeatSuite™ that provided us with protection on all levels of the network."*

— Alessandro Sala, IT Manager, Ferrari

**Trend Micro NeatSuite at work:** NeatSuite manages all Trend Micro antivirus software running on the network regardless of what devices they actually reside on. This allows policies to be distributed in real-time to all manageable clients/servers/devices using Trend Micro software or products.

# Trend Micro™ NeatSuite™

## COMPREHENSIVE PROTECTION

- Covers virtually every entry point on the network, providing comprehensive protection against viruses and other malicious code
- Offers cross-platform protection for the heterogeneous network providing multi-layer defence
- Integrates Trend Micro InterScan™, ScanMail™, ServerProtect™ and OfficeScan™ products, providing complete end-to-end coverage for the enterprise
  - Allows real-time scanning of complete gateway traffic for HTTP, FTP and SMTP
  - Detects and removes virus and other malicious code from email, attachments and public folders for real-time protection
  - Helps administrators to efficiently safeguard multiple print, file and application servers and domains from virus attacks
  - Provides network administrators control over the desktop environment to help protect with enterprise-wide virus control

## CENTRALISED MANAGEMENT

- Centralised management of an integrated suite of products allows for easy deployment of product updates and system monitoring
- Allows administrators to view virus activity, configure defences, set security policies and update protection throughout the network from a single console at any location
- Offers enterprise-wide reports that enable administrators to improve responses to future outbreaks by identifying network and system vulnerabilities

## LOWER TOTAL COST OF OWNERSHIP (TCO)

- Offers an economical, single vendor antivirus solution for organisations of any size
- Reduces the total cost of network downtime and network restoration by quickly responding to virus outbreaks at all critical points in the corporate network
- Reduces the risk of confidentiality breaches and exposure to legal liability with advanced capabilities and disclaimer enforcement features
- Automates system monitoring, software updates and configuration changes, thereby reducing the need for additional resources

## TREND MICRO ENTERPRISE PROTECTION STRATEGY SUPPORT

- NeatSuite is a key component of the Trend Micro Enterprise Protection Strategy, an industry-unique approach that addresses mixed-threat attacks through coordinated delivery of products, services and expertise, therefore maximising the benefits from each other
- In conjunction with EPS, the comprehensive set of products included in NeatSuite enables organisations to effectively deploy threat-specific prevention policies to block mixed-threats at appropriate points across the entire network.
- With NeatSuite, businesses can maximise the benefits of EPS to manage the explosive time, cost and system damage associated with outbreaks

## SYSTEM REQUIREMENTS

As hardware and software requirements for Trend Micro products change periodically, please refer to the NeatSuite product page of Trend Micro website for complete and up-to-date system requirements.

Whilst Trend Micro makes every effort to ensure that the content of this datasheet is accurate and up to date, Trend Micro does not accept liability for any technical inaccuracies contained within this datasheet.

# TrendLabs™

## 24X7 ANTIVIRUS SUPPORT

- Trend Micro products are backed by timely, high-quality service from TrendLabs, a global network of five regional antivirus research and support centers with an ISO 9002-certified headquarters. A team of more than 250 engineers and antivirus specialists operate around the clock to monitor virus activity, deployed information on new threats, and deliver prompt, effective strategies.
- For more information about Trend Micro service and support, contact TrendLabs at <http://www.trendmicro-europe.com/trendlabs>.

## TREND MICRO

### ENTERPRISE PROTECTION STRATEGY

Trend Micro NeatSuite is a key component of the Trend Micro Enterprise Protection Strategy, an industry-unique approach to antivirus and content security that addresses mixed-threat attacks through coordinated delivery of products, services and expertise throughout the outbreak lifecycle—outbreak prevention, virus response, and assessment and restoration. From attack-specific policy recommendations to cleanup and restoration templates, Enterprise Protection Strategy helps organisations continuously adapt as threats evolve.
