FOR THE ENTERPRISE

TREND MICRO

InterScan™ WebProtect™

EASY TO HANDLE, INTEGRATED, INDUSTRY-LEADING VIRUS SOLUTION FOR MICROSOFT™ ISA SERVERS

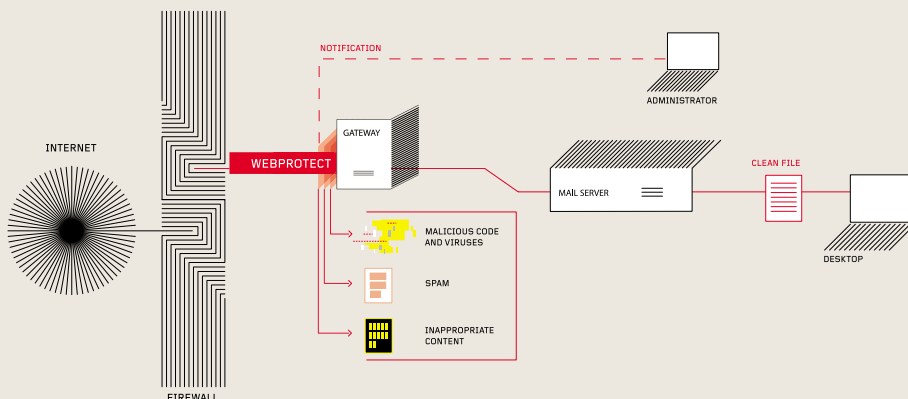

PROBLEM

The Microsoft Internet Security and Acceleration (ISA) Server provides fast, secure, and manageable Internet access for a growing number of enterprises. Yet, the same technology that enables quick access to Web content also exposes the enterprise network to attacks by Web-borne viruses and other malicious code. Mixed threats such as Nimda and Code Red, as well as hostile Java applets and ActiveX controls, spread through HTTP traffic. Traditional viruses and malicious code can also enter corporate networks when employees access their personal Web-based email accounts.

STRATEGY

Trend Micro, a Microsoft Gold Partner, provides Internet gateway virus protection for Microsoft ISA Server customers. Designed to work as a plug-in for ISA Server, Trend Micro InterScan WebProtect is a real-time ISAPI Web filter for viruses and malicious code and uses a true Win32 multi-threaded process for scanning HTTP traffic passing through the ISA Server. This integrated solution is easy to implement, offers high performance, and requires no additional hardware purchases or changes to client settings.

- Scans for known and unknown macro and script viruses, and known malicious Java and ActiveX code
- Enables quick and easy deployment without time-consuming end-user/client changes
- Saves time and money; no need to purchase and configure additional hardware

"Trend Micro is World-wide Leader in Server-Based Antivirus Software Market and growing fastest world-wide among top three antivirus vendors at 31% year over year."

– IDC, Antivirus Software 2002: A segmentation of the Market

WEBPROTECT™ AT WORK

WebProtect is designed to remove and block infected files in real time. The software lets administrators quickly prevent the message from reaching end users, and it notifies the administrator about the infected files.

Trend Micro™ InterScan™ WebProtect™

INTEGRATION WITH MICROSOFT™ ISA SERVER

- Provides an antivirus solution at the Internet gateway for users of the Microsoft ISA Server enterprise firewall and Web cache server
- Works as a Web filter to scan Web traffic in real time for viruses and malicious code; designed as a plug-in to ISA Server
- Streamlines installation and management, offers exceptional performance, and requires no additional hardware purchases or client setting changes

COMPREHENSIVE VIRUS PROTECTION

- Uses a true Win32 multi-threaded process that scans HTTP traffic passing through the ISA Server
- Provides virus scanning and security options, including scanning and auto-cleaning HTTP and FTP over HTTP virus-infected file transfers
- Protects against Internet worms, such as Code Red and its variants
- Detects known and unknown viruses through a powerful scanning engine that uses both rule-based and pattern recognition technologies
- Scans for known malicious Java applets and ActiveX objects

EASE OF USE AND MANAGEMENT

- Lets administrators pre-schedule automatic Web-based virus pattern updates at specific intervals or access the updates manually with a single mouse click
- Offers a comprehensive activity log that enables administrators to track the sources of potential security problems and respond appropriately
- Provides administrators with flexible configuration options that allow a variety of actions in response to virus or security incidents; actions include alerting the administrator, isolating infected files, deleting infected files, and permitting downloads under strictly controlled conditions

THE ADVANTAGES OF TREND MICRO

- **Global Innovation:** Trend Micro has been a pioneer in the antivirus software market since 1988, developing innovative strategies to protect information as new computing standards are adopted around the world
- **Server Market Leadership:** Trend Micro is the global leader in the overall server-based antivirus software market, with the #1 position in market share for Internet gateway and email server virus protection (Antivirus Software 2002: A Segmentation of the Market, IDC)
- **Flexible, Best-of-Breed Technologies:** Trend Micro antivirus products and services are designed to integrate seamlessly with leading firewalls, intrusion detection systems, and other best-of-breed solutions for the complete enterprise strategy
- **Services and Support:** Trend Micro products and services are backed by TrendLabs, a global network of antivirus research and support centres. TrendLabs monitors potential security threats world-wide 24x7 and develops the means to identify, detect, and eliminate new viruses

TrendLabs™

24X7 ANTIVIRUS SUPPORT

Trend Micro products are backed by timely, high quality service from TrendLabs, a global network of five regional antivirus research and support centres with an ISO 9002-certified headquarters. A team of more than 250 engineers and antivirus specialists operate around the clock to monitor virus activity, develop information on new threats, and deliver prompt, effective strategies.

For more information about Trend Micro service and support, contact TrendLabs at <http://www.trendmicro.com/trendlabs>.

SYSTEM REQUIREMENTS

- Intel™ Pentium™ III-compatible processor, 450MHz or higher
 - Microsoft™ Windows™ 2000 Server or Windows 2000 Advanced Server with Service Pack 1 or later*
 - 256MB RAM
 - 20MB of available hard-disk space
 - Microsoft ISA Server 2000
 - Microsoft IIS
- *Note: Will not support Windows 2000 Advanced Server with more than 2GB memory
